CS135 Project Description

Project Title: Names Are Better in Order

Group Name: JavaSquad

Group Members:

Michael Thomas   -   702-445-3128

Renat Norderhaug   -   925-640-5282

Description: Our project will be an alphabetizer using JavaScript that will alphabetize a user inputted list of names. It will take in first, middle, and last names, and organize names through user inputted functions, such as: sort ascending, sort descending, sort by first name, sort by middle name, and sort by last name. We are also attempting to input the program on a web browser for the extra credit. We think our project is fun, worthy, and interesting because we will gain knowledge on another programming language as well as making a program that is a very useful tool that can make our daily lives better.

We will use a 2D array which will contain a first name, middle name, and last name, and we will be declaring strings as variables and then printing them out with println. We will also be concatenating strings.
